Cancer Navigation Survey (CNS) data were collected from SCCS participants during May 2010 through January 2012. Participants who completed the first follow-up questionnaire in May, 2010 or later and indicated a cancer diagnosis were asked to complete the CNS questionnaire directly following completion of the follow-up survey. Additional participants were identified for the CNS survey only (i.e., not concurrent with the first follow-up survey) via identification of an incident cancer diagnosis in the state cancer registries.

Of participants reporting cancer during the first follow-up in May, 2010 or later, 78% continued on to complete the CNS. Of participants contacted de novo for completion of the CNS survey following cancer diagnosis from a state cancer registry, 23% chose to complete the survey.

The CNS was structured with a set of questions specific to either breast, prostate, lung, colorectal, or other cancers. Participants completed the questionnaire according to the type of cancer either self-reported or identified in the registry.
